

WE LIVE ON A PLANET

Our planet is one of many-and-counting
 in our solar system.
Our solar system is one of millions
 in our galaxy.
Our galaxy is one of billions
 in our universe.
Our universe is one of trillions
 in the cosmos.
Our cosmos is one of unknown quadrillions
 in existence, according to "M Theory."

What is it that makes some of us so certain that our planet is the **only** one,
Of an unimaginable number of possibilities,
To host self-aware life?

And exactly why would anyone want to put a lid on
The creative boundlessness of
Omniscient, Omnipotent, and Omnipresent?

Thy name is arrogance.

Get thee behind me.
