

HUMAN MIRACLES

Humans Being are
Compound - Complex,
Variegated, and naturally genetically modified,
Which makes every single one Unique.

There are over 7 billion inimitable Earth humans, and counting.
Each one became whole when it formed a 46 chromosome zygote
In its mother's womb.

That, alone, is a miracle.

That no two are 100% identical, is another miracle.

That they are all more alike than different, is a third miracle.

And three miracles, so they say, qualify a human for sainthood,
Which means that over 7 billion saints live on the surface of the Earth.

Furthermore, "Hu-man" literally means "god-man."
So, who's doing the naming here?
And why don't they believe themselves?

Where from, came the notion that humans aren't living a god-like life?

And who decided that a god-like life is different from the one they live?

What convinced them that pain, misery, sorrow, and despair
Were **not** godlike qualities? (All popular Gods suffered to earn the name.)

Who, what, or how, did the concept of an Almighty Loving God,
Beneficent Creator, Father and Mother, Holy Spark within all Life,
Devolve into an anthropomorphic, egocentric misogynist?

For all we really, truly, know,
Human Miracles are just God Being Human,
Expressing universal diversity and generating havoc,
Not only for entertainment, but also for self-evolution.

That's one way Miracles Happen!
