

CERTAINTY ISN'T

Our planet is one of millions in our galaxy.
Our galaxy is one of billions in our universe.
Our universe is one of trillions in our cosmos.
Our cosmos is only one of unbounded zillions.

Ad infinitum.

What is it

That makes some of us

So certain

Our planet is the **only** one,

Of an unimaginable number of possibilities,

To host conscious, self-aware, intelligent life?
